Education

NC State University , Raleigh, NC <i>B.S. in Electrical Engineering</i>	Aug, 2023 – May, 2027
ZHAW University , Winterthur, Switzerland <i>Exchange Student - Electrical Engineering Program</i>	Feb, 2024 – July, 2024

Work Experience

Lenovo , Mooresville, NC <i>Technical Product Management Intern(Customer Quality)</i> - Assisted on-site hardware and software reworks for our client Merck, resolving critical issues on over 5,000 devices across 3 major projects. - Acted as a technical liaison for Fortune 500 clients, translating complex hardware and software issues into actionable engineering requirements for cross-functional support teams. - Led development of automated test suite in C# for performance benchmarking across ThinkPad laptops and monitors, implementing process documentation and enabling consistent evaluations across L3 lab environment. - Collaborated with teams in China (Shanghai) and Japan (Yokohama), as well as manufacturing partners, to investigate and resolve root causes of hardware issues in laptop product lines, ensuring production quality and customer satisfaction. - Programmed and developed custom PCB solutions in C for gathering and analyzing impact forces in educational products, supporting new product development and manufacturing process optimization.	May, 2024 – Dec, 2024
Syntex Studios syntexstudios.io, Raleigh, NC & New York <i>Founder & Project Manager</i> - Managed full project lifecycle for 15+ clients doing user research and data analytics to do customer acquisition through automation and optimization of customer pipelines. - Developed project schedules using data-driven strategies, tracking key milestones and deliverables while managing project documentation including schedules, reports, and project files. - Led cross-functional team of 10 designers and developers, defining project scopes, managing timelines, and implementing project management best practices.	Feb, 2024 – Present
Kyma Technologies , Raleigh, NC <i>Technical Product Intern</i> - Conducted market research and competitive analysis on novel GaN semiconductor applications to define product viability and manufacturing feasibility, contributing to proposals that secured research funding for new product development. - Designed and deployed hardware and software automation tools for manufacturing test workflows, improving reliability and efficiency of internal testing processes for advanced semiconductor technology development.	Jan, 2024 – May, 2024

Leadership & Campus Involvement

Open Door Engineering opendoorengineering.org , Raleigh, NC <i>Founder</i> Founded non-profit organization focused on improving STEM accessibility for underrepresented communities, recruiting 20+ member team across three universities to develop engineering workshops to visit schools to encourage engineering exploration	August, 2025 – Present
NC State Innovation and Entrepreneurship , Raleigh, NC <i>President of I&E Ambassadors</i> Help organize and spearhead the innovation and entrepreneurship program outreaching to the community and donors to facilitate program growth	Aug, 2025 – Present
Digital Design Club digitaldesignncsu.club , Raleigh, NC <i>President</i> Led weekly meetings and organized workshops and industry talks focused on FPGA and ASIC design	Jan, 2024 – Fall, 2025
NC State NNF , Raleigh, NC <i>Undergraduate Research Assistant</i> Worked with Professor Spyridon Pavlidis on “Exploring Surface and Bulk Defect States for High-Power Vertical GaN Diodes with Mg Implantation” research in the Laboratory for Electronics in Advanced Devices and Systems (NCSU LEADS)	Nov, 2023 – June, 2024

Technical Skills & Qualifications

- Project Management:** cross-functional team coordination, milestone tracking, risk identification and communication, project documentation, schedules, reports, MS Office Suite (Project, Excel, PowerPoint)
- Hardware Design & Development:** PCB design, circuit analysis, hardware-software integration, embedded systems development, FPGA programming, digital signal processing
- Engineering & Technical:** C, C++, Python, PCB design, automated testing, process optimization, quality assurance, root cause analysis, technical liaison, hardware-software integration
- Test & Validation:** Automated testing frameworks, hardware validation, signal integrity analysis, performance benchmarking, root cause analysis, technical documentation
